

TECHNICAL DATA SHEET

SO CLEAN RP 200

So Clean RP 200 is a water-based rust preventative compound intended for use as a final dip or spray. It will prevent rusting of active clean steel, even when packed wet. It contains a biocide to prevent bacteria growth.

So Clean RP 200 will not affect waste treatment or subsequent finishing operations. The film is an oxygen scavenger, thus keeping the iron from forming the iron oxide rust. The film will rinse off easily in any cleaner, is non-oil, and is compatible with all subsequent finishing operations and most water-soluble paint applications.

The strength of **So Clean RP 200** required will vary according to the quality of water and type of steel; its degree of cleanliness and activity, and any contaminants left on the parts or dragged into the **So Clean RP 200** dip tank. Normally, 2-6% is sufficient. **So Clean RP 200** can be used at any temperature convenient to your operation, however running at a higher temperature will help facilitate in drying the parts.

CONTROL

So Clean RP 200 can be measured by a refractometer. To measure accurately, standards should be made up comprising the make-up water and **So Clean RP 200** at the lower (1%), median (4%), and upper (8%) operating conditions. The standards readings are correlated to the operating tank readings. The refractometer measures all the material in the water, so its reliability would be thrown off by any other materials dragged into the bath.

Read Material Safety Data Sheet before using this product.
